## **DETAILED ACTION**

## **Priority**

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 & 3-19 rejected under 35 U.S.C. 103(a) as being unpatentable over Nishimori et al [20020039699] in view of Bartel et al [20040137357] and Kido et al [6541173]. Nishimori et al teaches a toner having a core shell structure with a combination of both resins and waxes. The release agents are taught on pages 7 & 8 with a different resin as a core and shell note [0151]-[0154]. The combination of waxes and resins as components of a toner are taught by Kido et al to provide excellent offset-resistance and fixing properties to the toner at low temperatures. Bartel et al also teaches the use of two waxes having two different molecular weights. The use of different molecular weight waxes causes the melt distribution of the system to shift toward a higher temperature. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to use the binder resins and waxes that control the melt characteristics of a thermal toner and use the combination of resins and waxes in a core/shell structure of the toner as taught by Nishimori et al.

Application/Control Number: 10/810,886 Page 3

Art Unit: 1756

3. Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John L. Goodrow whose telephone number is 571-272-1384. The examiner can normally be reached on Monday -Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark F. Huff can be reached on 571-272-1385. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
